

Flexible

We offer a unique packaging concept called Schur®Star, which is a combination of premade flexible bags and a versatile packaging machine. The concept matches any product, packing process, segment, and market requirement.

Various design options

Our flexible bags are tailor-made to your exact needs and product. We offer versatile formats, various barriers, eye-catching designs, and different materials. The Schur®Star bags are very suitable for packing all kinds of food including fish and seafood. The bags can meet any needs, and can be designed in different materials, shapes, and formats, such as stand-up bags, and pillow-style bags. In addition, this can be combined with different features, such as handle hole, Euro hole, and re-closable zipper. Furthermore, the bags are made to secure the product and maintain a high level of food safety.

Efficient packaging process

Combining the flexible bags with the Schur®Star machines, you will get a highly efficient and optimized packaging process that makes sure the product is packed securely. The premade bags are delivered on a unique string, ready to roll on the Schur®Star packaging machine. The Schur®Star concept makes it possible for you to run different products and bag formats on the same packaging line as it is fast and easy to make a changeover without using any extra tools.

Carton

We customize the carton solution to your product requirements – from packaging to packing. Together with you, we will work to understand your product needs in-depth and develop an integrated solution. We design carton packaging specifically for your product – to make sure it protects the product, stands out with eye-catching design, and attracts customers.

Customized solution for your product

The carton packaging can be strong, leak-proof, and grease resistant. Our solutions are fully tailored to your product's requirements. Our packaging always offers protection against damage in transit as well as from contamination to make sure your product is safely delivered to your customers. The carton packaging can be folded into different shapes, decorated, and enhanced with sales-promoting treatments, such as gloss, embossing, and window inserts. This ensures that your product is protected and stored securely and attracts customers.

Packing technology

When it comes to packing your product in carton packaging, we ensure a safe and efficient packing method. Your product's unique characteristics may require it to be top loaded, end loaded or sleeved in a certain way. Whatever the challenge, we can create a custom-made solution to perform the specific handling tasks.

Your end-to-end supplier.
Carton packaging.
Flexible packaging.
Machines and logistics.
Marking and labels.

Schur Fish & Seafood

Schur® Star

The premade flexible bags on a string are fed into the Schur®Star machine and the bags are filled with the product. The filling process can be carried out both automatic, semi-automatic and manual.

Marking & Labels

Before filling the bags, the bag can be labelled and/or marked on both the front and the back. We offer a wide selection of marking equipment and labels for this process.

Carton

The carton is erected and glued, and the product is then loaded into the carton packaging – either top loaded, end loaded or sleeved.

Palletizing

The products are packed on pallets - ready to be sent to customers. Our pallet handling solutions are flexible and range from layer palletizers to robot palletizers.

Stretch Wrapping

The pallets and the goods on it are wrapped in a stretchable film to secure the goods for onward shipment.

Wrap-Around

The products are packed into shipping packaging and prepared for palletizing.

Minimizing the use of materials

We focus on minimizing waste when developing and designing packaging, and we have a strong focus on utilizing the whole packaging. We do this to optimize the use of our shared resources and to future-proof

your packaging solution. We are always working on developing our packaging and solutions – both in terms of packaging utilization, new materials, barrier properties and much more.

Your total solution provider

As an **end-to-end supplier**, we've got the right expertise and know-how to take your product all the way. Whether your product demands a tailor-made package construction, a specific loading method, or a stand-out appearance, we can provide a customized solution to match your requirements.

Tailor-made solutions for the fish industry

We have many years of experience in creating tailor-made solutions for the food and fish industry – both in terms of flexible packaging, carton packaging, machinery, and end-to-end solutions. With a Schur packaging and packing solution, you can pack both whole fish and portion sizes in packaging that catches

consumers' attention and protects the product. Our solutions are designed to deliver on even the most complex requirements and to make sure your product gets safe all the way from loading into the packaging to palletizing.

From packaging to packing

Our packaging capabilities include design, production, process technology, marking, labels, logistics and palletizing. In close cooperation with you, we will define the right packaging and technological solution for your product and your business. We bring the know-how to integrate every element into a seamless and cost-efficient solution for you.

Case

New plastic free coating for carton packaging

Ever since the early 1950s, we have collaborated with A. Espersen A/S on the development and production of their carton packaging for retail and seafood dishes.

The last two years, we have worked together on how to remove the thin layer of PE inside the carton packaging. The PE layer is used to create a hygienic barrier and to prevent stains from the breaded fish from penetrating the carton. The result is a new coating that is water-based and without plastic – and it still has the same barrier properties.

The new coating makes the carton package more recycle-friendly, and by 2025 Espersen will have removed the use of approx. 125 tons of plastic from their packaging production.
